Index: volume 2 numbers 1–3

Subject and title index

A
A meta-model for interacting with computers 147
A methodology for the design of computerised qualitative research tools 33
abstraction 205
advice 313
An interface prototyping system based on Lean Cuisine 217
An overview of knowledge acquisition methods 83
application modelling 205
artificial intelligence 367
autocompletion 59
B
browsing 297
bugs 8
C
command predictability 75
communication 229
computer aided creativity 161
Computer Supported Cooperative Work 175
computer-mediated interaction 229
conceptual models 147
conversational analysis 279
cooperative requirements capture 92
cooperative systems 313
D
data analysis 33
database interface 367
Datenbank-DIALOG: how to communicate with your database in German (and enjoy it) 367
design methodologies 33, 92
design notations 205
E
Enhancing the efficiency of multiparty interaction through computer mediation 227
evaluation product dysfunction 190
Expanding human-computer interaction by computer-aided creativity 161
expert systems 119, 259
F
field trials 26
formal methods 26
Further discussion on increasing the efficiency of multiparity interaction 247
G
group interfaces 175
group working 92
H
HCI design 279
HCI 'Intraface Model' for System Design 279
Historical analysis: a method for evaluating requirements capture methodologies 190
Human aspects of interactive multimedia communication 175
human-centred 119
Human-centred expert systems: a response to Taylorism and the scientific paradigm 119
human-computer interaction 8, 26, 33, 59, 161
hypertext 297, 337
I
image interpretation 259
Incremental maintenance of semantic links in dynamically changing hypertext systems 337
input devices 59
intelligent tutoring 297
interface design tools 217
interface design techniques 217
interpersonal communication 175
intraface 279
K
knowledge organisation 131
knowledge acquisition 83
knowledge-based systems 83
L
Lean Cuisine: no sauces, no courses! 205
learner models 297
M
machine-centred 119
marketing to design 92
medical expert systems 131
menu design 205
metaphors 147
methodology 33, 190
models 147
Monitoring hypertext users 297
multimedia 175
multiparty interaction 229
N
natural language processing 367
notation 147
O
office systems 175
P
philosophy 131
planning 313

requirements capture methodologies 190
requirements specification 92
S
software 26
software reliability 8
spreadsheets 75
stakeholder analysis 190
T
taxonomies 147
Taylorism 119
terminology 147
The contribution of practitioner case studies to human-computer interaction science 3
The predictability of commands in a spreadsheet program 75
3M: a user modelling interface of an expert system for x-ray topographic image interpretation 259
touchscreens 59
U
user interface 75, 259
user modelling techniques 259
user models 259, 297
user-centred approaches 92
Using a touchscreen for simple tasks 59
USTM: a new approach to requirements specification 92
W
What philosophy can offer to information science: the example of medical expert systems 131
X
X-ray topography 259
Y
You're right about the cure: don't do that 8

Author index

Anderson, P S An interface prototyping system based on Lean Cuisine 217
Anderson, S see Thimbleby, H 330
Apperley, M D see Anderson, P S
Batsell, R R see Guadagno, N S
Bevan, J R see Tjahjadi, T
Boies, S J see Gould, J D
Booth, P Redefining software: a comment on Thimbleby's paper 26
Bowen, D K see Tjahjadi, T 259
Boyle, T Further discussion on increasing the efficiency of multiparty interaction 247
Brooks, R The contribution of practitioner case studies to human-computer interaction science 3
Buchberger, E see Trost, H 367
Catudal, N What philosophy can offer to information science: the example of medical expert systems 131
Cockton, G Lean Cuisine: no sauces, no courses! 205
David, J R A methodology for the design of computerised qualitative research tools 33
Forrester, M HCI 'Intraface Model' for system design 279
Fowler, C see Macaulay, L
Fowler, C J H Historical analysis: a method evaluating requirements capture methodologies 190
Gale, S Human aspects of interactive multimedia communication 175
Gilbert, G N Planning procedural advice 313
Gould, J D Using a touchscreen for simple tasks 59
Greene, S J see Gould, J D
Guadagno, N S The predictability of commands in a spreadsheet program 75
Holden, P Human-centred expert systems: a response to Taylorism and the scientific paradigm 119
Hutt, A see Macaulay, L
Jirotka, M see Gilbert G N
Kaplan, S M Incremental maintenance of semantic links in dynamically changing hypertext systems 337
Kirby, M see Macaulay, L
Kirby, M A R see Fowler C J H
Lane, D M see Guadagno, N S
Maarek, Y S see Kaplan, S M
Macaulay, L USTM: a new approach to requirements specification 92
Macaulay L A see Fowler C J H
Meluson, A see Gould, J C
Napier, H A see Guadagno, N S
Nielsen, J A meta-model for interacting with computers 147
Novick, D G Enhancing the efficiency of multiparty interaction through computer mediation 227
Rasamny, M see Gould J D
Reason, D see Forrester, M
Savolainen, T Expanding human-computer interaction by computer-aided creativity 161
